SITUATION OVERVIEW

- In 2018, 154,527 suspected cholera cases reported.
- The number of suspected cholera cases has been increasing for 13 consecutive weeks.
- In the high-risk areas of Al Hodeida* and Ibb governorates, nearly 400,000 people received the first dose of Oral Cholera Vaccine (OCV) in early August.

* OCV conducted in Hodeida thanks to 4 days of tranquillity negotiated with all parties to the conflict.
